1984 MOPED PARTS & PRICE LISTS

In an attempt to standarize certain basic components common to numerous brands of cycles, we have in many instances, within the parts lists, referred the user to another section of the catalogue. In the long run, this will aid in establishing a universal system for moped parts, assisting both our dealers and ourselves in keeping inventories down to a minimum.

Diagrams have been presented where possible, to aid the user in locating the required parts. Use of PART NUMBERS will greatly expedite your shipments and prevent any misunderstandings. Note: In cases where the reference number is the same as the part number, the price of the item will appear just to the right of the part number. In cases where the reference number and the part number differ, the price of the item may be found by referring to the section noted in the price column, and then to the appropriate PART NUMBER.
